**NOTIFICATION – 24**

**January 01, 2021**

In the twenty first century, there are significant changes related to new scientific discoveries, informatization and globalization, the development of astronautics, robotics and artificial intelligence. It is an exciting era in which the marvellous inventions of the World Wide Web and the Internet have created a new economy leading to a different way of life for many people. This century is known as the era of digital technologies and knowledge. As we transit into the new economy and the new environment of the 21st century, the infrastructure and institutions of the former economy and century become obsolete. The new age simply demands a new kind of infrastructure, and universities / institutions have to be transformed in order to remain relevant.

The innovative digital teaching models offers not only a frameworks for research but also a research based model for universities/ institutes to examine their own practices with digital technologies. The model combines previous research on college improvement, creation of innovations, and digital technology in education as a special case of innovations and learning as knowledge creation to define the vision of the college/ universities, leadership, practices of the teaching community, pedagogical practices, college level knowledge practices and digital resources.

A National Education Policy approved by the Union Cabinet in July 2020 is a comprehensive framework to guide the development of education in the country. It was announced at a time when the education sector was passing through a crisis of unprecedented disruption, but thanks to the technology and up-gradation of academic delivery and assessment via online mode that the NEP has been taken up in a positive manner by the educationist and students. Various methods were adapted by which the academic content could be delivered unblemished to the students.

In today's world education is facing major challenges to provide knowledge and skills to the students with competencies they will need in the future, to consider informal ways of learning, and to apply digital technologies and modern pedagogical methods to address these challenges. The teachers must be updated and refreshed regularly through the different Faculty Development Programs as they play important role in the development of nations enhancing skills and grooming the devoted human resource.

Keeping above mentioned point in mind, Faculty Development Centre (FDC), HNB Garhwal University, established under the PMMMNMTT scheme of MHRD, Govt. of India is organizing One Week Short Term Program (Faculty Development Programme) through online mode on **Pedagogy of Digital Learning and New Education Policy** during January 19-25, 2021.
